

740 BED MJHH HOSPITAL RISK TESTING RESULTS WITH PUREBIOTICS®

As can be seen in this overall view the testing, the **PRE-Testing cultures are in the Top Row** to set the base “Control”. The **second row** is the test results from after **one week** of using StaBiotics from PureBiotics® – and the **3rd row** is **week-2** & the **4th row** is **week-3**.

The PureBiotics® products performed as claimed, that the Probiotics-In-Progress action of StaBiotics® builds “Control-Of-The-Environment” in all areas used over a short period of a few weeks. In support of this, the test results were dramatic by the end of the second week and StaBiotics® showed solid control of areas cleaned by week-3.

This resulting Control of Infectious contamination will continue with StaBiotic® use
